

## Who I am?

I am **Juhani Ovalo**, an experienced **software developer** with a versatile background in system management and application development. Recently, I have focused on React-based front-end development and software maintenance, ensuring both modern and legacy systems remain functional and up to date.

I actively incorporate AI-driven tools into my workflow and work effectively within Scrum teams, whether in remote or hybrid settings. I value open communication and consider professional feedback essential for continuous improvement and delivering high-quality results.

## What I do?

- **Front-end & UI:** Modernizing and building accessible, responsive user interfaces, primarily using React.
- **Back-end Support:** Developing application logic and robust APIs with Python and Django.
- **AI-Enhanced Workflow:** Leveraging AI tools to streamline coding, refactor legacy systems, and maintain high standards of code quality.
- **Agile Collaboration:** Working in Scrum environments to ensure iterative progress and seamless communication in remote or hybrid settings.
